

STATS 205: Homework Assignment 6

Brian Liu

6/14/2019

Solution to Problem 1

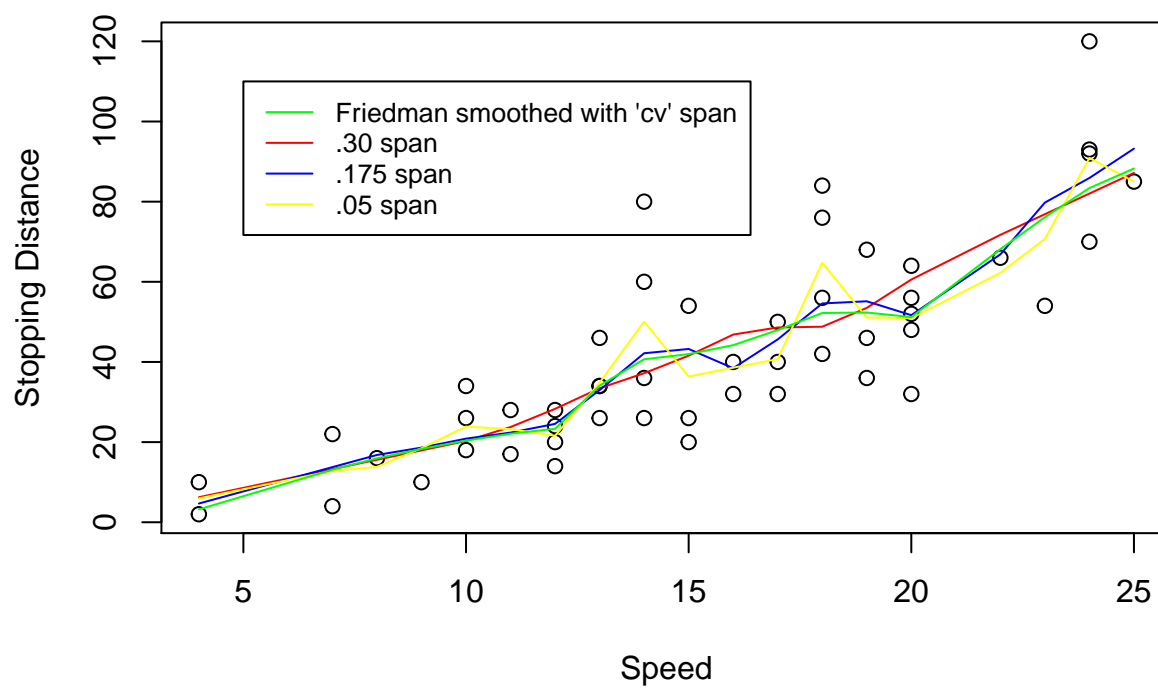

```
library(datasets)
data(cars)
head(cars)
```

```
##   speed dist
## 1     4    2
## 2     4   10
## 3     7    4
## 4     7   22
## 5     8   16
## 6     9   10
```

```
cars.supsmu = supsmu(cars$speed, cars$dist, bass = 0, span = "cv")
cars.supsmu2= supsmu(cars$speed, cars$dist, bass = 0, span = .30)
cars.supsmu3= supsmu(cars$speed, cars$dist, bass = 0, span = .175)
cars.supsmu4= supsmu(cars$speed, cars$dist, bass = 0, span = .05)

plot(x = cars$speed, y = cars$dist,
     main = "Stopping distances for various speeds",
     xlab = "Speed", ylab = "Stopping Distance")
lines(x = cars.supsmu2$x, y = cars.supsmu2$y, col = "red")
lines(x = cars.supsmu3$x, y = cars.supsmu3$y, col = "blue")
lines(x = cars.supsmu4$x, y = cars.supsmu4$y, col = "yellow")
lines(x = cars.supsmu$x, y = cars.supsmu$y, col = "green")
legend(5, 110, legend=c("Friedman smoothed with 'cv' span", ".30 span", ".175 span",
                        ".05 span"), col=c("green", "red", "blue", "yellow"), lty=1:1, cex=0.8)
```

Stopping distances for various speeds

TODO: How do you tell what the cv value for span was?
