STATS 205: Final Project Write-Up

Brian Liu 6/14/2019

1. Background of the data and why it is interesting or important

The data we are using is the data from WHO suicide statistics from Kaggle. This gives populationbased statistics on suicide rate...

2. Explanation of the method studied and its properties

3. Data analysis or simulation study

We will use the crude rate of suicide per 100,000 people.

This analysis provides information on age-standardized rates...

                                                  1
     After filtering countries with missing suicide rate, take a random sample of 100 countries and
     make sure each continent has approximately equal countries.
                          100 countries
                                      \approx 14 to 15 countries per continent
Filter countries by continent:
library(countrycode)
filtered_suicide_df$continent <- countrycode(sourcevar = filtered_suicide_df[, "country"],
                             origin = "country.name",
                             destination = "continent")
## Warning in countrycode(sourcevar = filtered_suicide_df[, "country"], origin = "country.name", : Some
